

In the Claims:

1. (Currently Amended) A method for determining a licensing policy of using at least one digital product by ~~at least one user~~ a plurality of users of an organization, comprising the steps of:

- (a) conducting a tolerant licensing policy for the use of the at least one digital product by the ~~at least one user~~ plurality of users during a trial period;
- (b) monitoring at least one parameter of said use during said trial period; and
- (c) ~~determining a licensing policy~~ implementing, only by the plurality of users, at least one optimization method based on ~~according to~~ said monitoring of said at least one parameter to obtain a ~~determined~~ new licensing policy.

2. (Currently Amended) The method of claim 1, wherein said step of monitoring includes collecting at least one sample of said at least one parameter, and wherein said step of ~~determining~~ implementing includes evaluating the performance of said tolerant licensing policy ~~according~~ based on said at least one sample.

3. (Currently Amended) The method of claim 1, further comprising steps of, in at least one loop, re-evaluating said ~~determined~~ new licensing policy, and optimizing said ~~determined~~ new policy according to said re-evaluation.

4. (Currently Amended) The method of claim 1, wherein said tolerant licensing policy comprises at least one rule being less restrictive than a corresponding rule of said ~~determined~~ new licensing policy.

5. (Original) The method of claim 1, wherein said tolerant licensing policy includes free usage of the at least one digital product during said trial period.

6. (Original) The method of claim 1, wherein said at least one parameter is selected from a group consisting of a time count and a run count.

7. (Currently Amended) The method of claim 6, wherein said time count is selected from the group consisting of the time of posting of a request for a license, the time a license is in use by ~~a-user~~ one of the users, and the average time ~~a-user~~ one of the users has to wait in a licensing queue until a license is issued.

8. (Currently Amended) The method of claim 6, wherein said run count is selected from the group consisting of the number of times licenses have been issued, the number of times a license has been requested, and the number of times ~~a-user~~ one of the users gave up requesting a license.

9. (Currently Amended) The method of claim 1, wherein ~~said at least one user~~ the plurality of users is selected from the group consisting of ~~at least one machine~~ a plurality of machines, at least one organization and at least one department of an organization.

10. (Currently Amended) The method of claim 1, wherein ~~said at least one user~~ the plurality of users is defined manually.

11. (Currently Amended) The method of claim 1, wherein ~~said at least one user~~ the plurality of users is defined automatically.

12. (Currently Amended) The method of claim 1, wherein ~~said at least one user~~ the plurality of users is selected from the group consisting of the first N users that invoked said product during a first predefined period, the first N users that used said product for at least a predetermined duration during a predefined period, and a combination thereof.

13. (Currently Amended) The method of claim 1, further comprising ranking ~~said at least one user~~ each user from among the plurality of users, and issuing a license to the user having the highest rank among the users waiting in a licensing queue.

14. (Original) A method according to claim 13, wherein the rank of a user waiting in a licensing queue is upgraded according to the waiting time of said user in said queue.

15. (Currently Amended) A method for determining a number of available licenses in a licensing pool, the licenses directed for the use of at least one digital product by ~~at least one user~~ a plurality of users of an organization, the method comprising the steps of:

- (a) issuing a tolerant maximum number of licenses to said licensing pool;
- (b) complying with said maximum number of licenses from said pool that come from ~~said at least one user~~ the plurality of users, and monitoring a count of the issued licenses; and
- (c) when said trial period is over, determining, only by the plurality of users, the maximum available licenses in said pool by implementing at least one optimization method based on said monitoring.

16. (Original) The method of claim 15, wherein said count is selected from the group consisting of a time count and a run count.

17. (Currently Amended) The method of claim 15, further comprising the steps of repeating steps (b) and (c) in at least one loop.

18. (Original) The method of claim 15, wherein said optimization method includes counting a percentage of the licenses being used in a time unit.

19. (Original) The method of claim 15, wherein said at least one optimization method includes counting the number of maximum licenses being used at the same time.

20. (Currently Amended) The method of claim 15, further comprising ranking ~~said at least one user~~ each user from among the plurality of users, and issuing a license to a user having the highest rank among users waiting in a licensing queue.

21. (Original) The method of claim 20, wherein said rank of a user waiting in a licensing queue is upgraded according to the waiting time of said user in said queue.

22. (Currently Amended) The method of claim 20, wherein said rank of a user is determined according to his hierarchy among ~~said at least one users~~ the plurality of users.
